Passive Vented Triggers From APackaging Group

Almost all conventional triggers are equipped with Active venting which are designed to allow air in or out of the container every time the trigger is pulled by the end user. Passive vented trigger sprayers, on the other hand are designed to, in addition to active venting, allow only air and gas molecules to pass through a membrane, continually equalizing pressure without any action by the end user. This is essential when containers are filled with chemically active formulations, such as bleach and hydrogen peroxide, and are stored idle while exposed to pressure and temperature variations. Serious consequences, such as bloated or collapsed containers, leaks and even ruptured containers often occurs in such packages.

APG Passive vented triggers are equipped with a membrane plug that provides Passive venting. This sprayer is also e-commerce capable.

Zero-Waste Aerosol Can Recycling
When we began recycling aerosols over 35 years ago the topic did not surface as much as it does today. Throughout our history we have dedicated our experience, resources and innovation to fulfilling the aerosol industry’s distinctive recycling needs. Through careful attention to evolving requirements we are prepared for an expanded capability. We offer our unique approach to recycling, whether as products excluded from RCRA or as Universal Waste.
Let us be your partner in recycling your unsaleable aerosols, as we help you exceed your financial and sustainability goals.
