Lightweight PCR Aerosol Cans

LINHARDT now offers lightweight aluminum aerosol cans made of 100% post-consumer recycled (PCR) aluminum and 0.3% manganese. According to the company, the material reduction for 150 ml cans with diameter 45 mm amounts to >17%. The slugs are produced directly from the molten aluminum scrap without an energy-consuming second melting process leading to an extremely low carbon footprint of only 1.1 kg CO₂e per kg slug – a reduction by 92% compared to the company's virgin slugs. In addition, the lighter cans cause less transport emissions. Linhardt is currently working on lightweight cans with diameter 50 mm.

Zero-Waste Aerosol Can Recycling

When we began recycling aerosols over 35 years ago the topic did not surface as much as it does today. Throughout our history we have dedicated our experience, resources and innovation to fulfilling the aerosol industry's distinctive recycling needs. Through careful attention to evolving requirements we are prepared for an expanded capability. We offer our unique approach to recycling, whether as products excluded from RCRA or as Universal Waste.

Let us be your partner in recycling your unsaleable aerosols, as we help you exceed your financial and sustainability goals.
